

第二章

五.3. class PlateMonitor {

condition plateNum = 1;

void getPlate() { P(plateNum);
~~plateNum++~~;

void putPlate() { ~~plateNum++~~;
V(plateNum);

}

class OrangeMonitor {

condition orangeNum = 0;

void getOrange() { P(orangeNum); }

void putOrange() { V(orangeNum); }

}

class ~~Apple~~ AppleMonitor {

condition appleNum = 0;

void getApple() { P(appleNum); }

void putApple() { V(appleNum); }

}

~~Father~~

void father() {

plateMonitor.getPlate();

放水果

if (是苹果) AppleMonitor.putApple();

else ~~AppleMonitor~~.OrangeMonitor.putOrange();

}

void son() {

plateMonitor.getPlate();

OrangeMonitor.getOrange();

吃

plateMonitor.putPlate();

}

void daughter() {

plateMonitor.getPlate();

AppleMonitor.getApple();

吃

plateMonitor.putPlate();

}

~~void~~ main() {

cobegin

father(), son(), daughter()

coend

};
