

4. ~~PAI~~

```

PAI() {
    P(b1);
    写;
    V(b1);
}

PB() {
    P(b1);
    P(b2);
    复制;
    V(b1);
    V(b2);
}

PC() {
    P(b2);
    打印;
    V(b2);
}

```

```

main() {
    semaphore b1, b2, b3 b1, b2, b3;    // b_i=1 表示缓冲区 i 可用
    b1.value = b2.value = b3.value = 1;
    cobegin
        PAI() PB() PC()
    coend
}

```

5.

```

customer() {
    P(seat);
    P(barber);
    V(custNum);
    P(barberN);
    理发;
    V(seat);
    付款;
    P(payOk);
    离开;
}

barber() {
    while (true) {
        P(custNum);
        理发;
        收费;
        V(payOk);
    }
}

```

```

main() {
    semaphore seat = 1, barber = 1, custNum = 0, payOk = 0;
    cobegin
        customer(); barber();
    coend
}

```
